

Umair Khan

Lead DevOps Engineer

I'm a DevOps Engineer with hands-on experience building, deploying, and troubleshooting production systems across AWS, Kubernetes, Terraform, and CI/CD pipelines. Over the years, I've learned that real DevOps isn't about the tools—it's about handling incidents, keeping services running during failures, and helping teams ship safely without breaking production. I've designed high-availability infrastructure for peak traffic and optimized cloud costs.

ELK

Python

Prometheus

Istio

Grafana

Kafka

Oathkeeper

WORK EXPERIENCE

Lead DevOps Engineer

SchoolVoice, UAE

12/2021 - Present

Remote

- Led and executed the AWS Well Architected Framework review, enabling the platform to earn official AWS Well Architected certification for security, reliability, performance, and cost-optimized architecture.
- Designed Kubernetes infrastructure with Spot and On-Demand node groups that reduced cloud costs while maintaining high availability during node failures and traffic spikes.
- Built comprehensive observability stack using Prometheus, Grafana, and AlertManager with custom webhook integrations for Slack notifications and automated playbook execution to reducing mean time to resolution (MTTR).
- Configured Oathkeeper to validate JWT tokens, extract user information from token payloads, and pass authenticated user context to downstream services.
- Built real time data replication pipeline from AWS RDS Aurora to OpenSearch using Kafka and Debezium.

Lead DevOps Engineer

VentureDive, PK

07/2019 - 11/2021

Hybrid

- Onboarded a fintech project from scratch on DigitalOcean using Kubernetes and Istio, designing infrastructure patterns that enabled the platform to pass PCI DSS compliance.
- Implemented Istio service mesh across microservices, reducing security vulnerabilities by 70% through mTLS encryption and centralized policy enforcement, while maintaining sub-100ms latency overhead.
- Standardized Kubernetes deployments across 15+ projects using reusable Helm charts, reducing deployment errors by 80% and enabling consistent rollback capabilities.

Sr.DevOps Engineer

Careem, PK

01/2017 - 07/2019

OnSite

- Designed and maintained CI/CD pipelines on Jenkins that enabled safe service deployments.
- Built comprehensive monitoring framework using Prometheus, Grafana, and custom exporters, reducing mean time to detect (MTTD) production issues.
- Implemented proactive alerting using Prometheus standard deviation functions, enabling early detection of anomalies before they impacted users and maintaining 99.9% service availability.
- Automated AWS infrastructure cost optimization using Python scripts, identifying and removing orphan resources that reduced monthly cloud spend by 25% without impacting service performance.
- Automated blue-green deployments using Python scripts that provisioned Elastic Beanstalk via Terraform, monitored CloudWatch metrics, and sent Slack notifications, enabling data-driven deployment decisions and reducing rollback time from hours to minutes.

WORK EXPERIENCE

Sr. System Administrator

Right Solutions, PK

12/2013 - 01/2017

OnSite

- Designed and maintained AWS infrastructure including EC2, RDS, VPC, and auto-scaling groups, ensuring high availability and cost optimization for production workloads.
- Deployed and maintained 3-node Proxmox VE high-availability cluster with Ceph storage replication, achieving zero-downtime VM failover capabilities.
- Designed and implemented high-traffic Linux web infrastructure using Nginx, Apache, and Varnish with Nginx Plus load balancing, supporting millions of requests per day.

Sr. System Administrator

Arpatech, PK

11/2011 - 12/2013

OnSite

- Deployed and managed VMware ESX environments across local and remote data centers with automated VM backup using GhetoVCB, ensuring disaster recovery capabilities.
- Configured Varnish with Nginx load balancing and auto-failover, improving website performance and maintaining service availability during server failures.
- Automated infrastructure management using VMware PowerCLI scripts for VM reporting, Mikrotik scripts for firewall management, and bash scripts for remote deployments.

PERSONAL PROJECTS

Built an automated Kubernetes resource optimization tool that recommends deployment resource requests and limits based on historical usage patterns [↗](#)

Developed Slack bot that enables teams to trigger ArgoCD deployments, rollbacks, and logs using Slack commands [↗](#)

Boilerplate for deploying AWS infrastructure and applications using Helm and ArgoCD [↗](#)

Developed a demo pipeline in GitHub Actions highlighting testing, security, quality checks, and Docker builds [↗](#)

Built a demo project using Vagrant to provision a complete local multi-node Kubernetes cluster running a Flask app [↗](#)

CERTIFICATES

CKA - Certified Kubernetes Administrator

CCNA - Cisco Certified Network Associate
Routing and Switching

CXFF - Cisco Express Foundation for Field
Engineers

RHCE: Red Hat Certified Engineer (Training)

EDUCATION

B.S. Computer Science

Preston University
